# NATURAL STONE INDUSTRY IN TURKEY

TURKEY is a land of marble and travertine.

Turkey, situated on the Alpine Belt, where the world's richest marble deposits are found, is among the world's oldest natural stone producers with **four thousand years of production history** that starts in the Marmara Island. With the Marmara and Aegean Regions at the forefront, almost in all geographical regions from the Thrace to the Eastern Anatolia, **more than 400 different colors textures and patterns of natural stones** are found that gained appreciation about their quality in the world markets. Marble and travertine being in the first place, granite, onyx, limestone, basalt, andesite, slate stone and diabase are types of stones that are produced in Turkey.

Turkey is also among the most important natural stone producers in the world, with its developing industry and production technology. Turkish natural stone sector has an important place in the world with its **richness of variety and reserves, sector experience, abundance of raw materials, ease of shipment in sea transportation, its dynamic sector structure, the new technologies being utilized and its broad color spectrum**. Today, Turkey is one of the most important countries in the natural stone sector with more than a thousand large and small quarries.

## Common Characteristic Qualities of Turkish Marbles

- > **Quality** - Free from any cracks or other defects
- > **Color** - There is a wide range of colors, which allows a wide range of choice
- > **Sizes** - Sufficient to yield big blocks
- > **Uniformity** - Consistency in quality
- > **Pattern** - Decorative arrangements of colors and crystal compositions are possible

Besides these common properties every marble has its specific colors and composition, which make it possible to use them in the production of exclusive products.

You can see the unique selection of Turkish Stones in the link down below.

<http://www.turkishstones.org/ts/>

## Production in Turkey

More than 1.500 marble quarries, 2.000 factories and about 9.000 workshops operate in the sector. 90% of quarries are located in the west of Anatolia, mainly in Aegean and Marmara Regions.

The production of natural stones in Turkey has grown rapidly in the last decade. Large scale private companies invested in integrated processing plants, which resulted in developments in the local market. With the introduction of modern production equipment and methods, Turkey has become one of the world's prominent natural stone producers. In 2016, Turkey's total production volume of natural stones was 19.9 million tons. Turkey is the 3rd largest producing country in the world. These stones and marble processing technologies are exhibited in international fairs and local fairs organized in Turkey.

## Export

Turkey is the 1st largest exporting country in the world in marble and travertine (except granite). Natural stone exports have developed rapidly in the last ten years. Turkish stone can be found in the buildings and sidewalks of 200 different countries. The total value of natural stone exports reached 1.8 billion \$ in 2016 and it became 2 billion \$ in 2017.

# NATURAL STONE CLUS<sup>TR</sup>

Natural Stone ClusTR is created within the scope of Istanbul Mineral Exporters' Association in 2016 with the support of the Turkish Ministry of Economy. It consists of 32 Turkish companies that put their forces together in order to sail together through the global natural stone market.

The project started with the analysis of the member companies followed by a series of educations. An international marketing strategy has been developed and potential markets have been selected for a period of 3 years. From the beginning of the project to today, our cluster members visited Italy, China, United States of America and Australia.

Our cluster aims not only to boost export volumes of its members, but also to contribute Turkey to reach its total exportation target of 500 billion USD until 2023. Its members provide global markets with the best quality Turkish natural stones, especially marble. We proudly trade block, slab, tile and cut-to-size marble products to many countries all around the world.

Natural Stone ClusTR will continue to investigate new potential markets and organize both trade missions and hosted buyer events. You can follow the activities through our web site [www.imib.org.tr](http://www.imib.org.tr) or simply contact with the project specialist Ms. Dilara MESE.
